### ADSTRACT

In 1985, Miami-Dade Community College conducted a survey of Florida's community colleges to gather information about the colleges' placement offices. All 27 colleges were contacted by phone, and a series of brief questions were asked of the individual responsible for placement. Survey findings included the following: (1) 74% of the colleges had formal placement offices; (2) Job Services of Florida helped place the students at three of the seven schools that did not have placement offices; (3) 70% of the placement offices reported to the Student Services area; (4) only 25% of the offices had an individual dedicated to job development; (5) of the schools with a high volume of Associate in Science degree graduates, only one did not have a job developer as part of the staff; (6) in 70% of the schools with placement offices, both the placement office and the vocational education department were doing placement activities and made their information available to each other; and (7) among the placement innovations highlighted by the respondents were targeted mass mailings to graduation applicants and employers, resume files matched against job files with computerized updates of both, full-time job developers, the use of alumni networks, and early targeting and help for disadvantaged students. ### Survey of Placement Offices In Florida Community Colleges

The State of Florida now requires a formal and somewhat rigorous review of programs offered by community colleges. For vocational programs, the percent of graduates working in a related field is perhaps the most crucial outcome measure in the program review process. While most of Miami-Dade's occupational programs meet the current criteria of 60% placed in a related field, the requirement will soon change to 70%. And, for those programs failing to meet the present "60% rule" or the future "70% rule", a plan must be submitted for program improvement.

A major factor in showing program success at the College is the ability to accurately follow-up students and identify those who are working in related fields. A fairly sophisticated system for follow-up has been jointly developed by the Office of Institutional Research, the placement offices, and occupational program managers. (See the following documents for a description of this system: Research Reports #84-31, #83-36, and the Placement and Follow-up Summary Manual, September, 1984). Of equal importance, however, are the efforts at the College to place students in related employment. The ability to match students to jobs is a good drawing card for recruitment.

While Miami-Dade has fairly active placement offices on each campus, their primary focus has been on securing part-time employment for currently enrolled students. Many of these students could not attend school without the income provided by a part-time job. Placement services are available for any student or graduate, but staff and time limitations have for the most part prevented any concerted effort to do job development for graduates, or to actively contact and seek out the graduates. Deliberations are currently underway at each campus to emphasize graduate placement. This issue was discussed at the College-wide Placement and Follow-up Committee Meeting in March of 1985, and Institutional Research volunteered to conduct a survey of Florida community colleges to determine the placement office practices occurring throughout the State. The purpose of this brief report

is to present the results of that survey which will hopefully aid in campus deliberations.

a specialist of minimal state of the me and state of the transfer of the state of the state of the state of the

All 27 community colleges were contacted by phone and a series of brief questions asked of the individual responsible for placement. Table 1 presents the results alphabetically by college. A brief description of the column headings follows:

- (1) "TOT A.S. GRAD" This is the total number of Associate in Science degree graduates for 1982-83. The data have been coded into ranges for the groupings which are used in Table 2.
- (2) "% OF ALL GRADS" This is the percent that the Associate in Science degree graduates are of the total graduates for the school.
- (3) "HAVE PLMT OFFICE?" This is the response to the question of whether the college had a formally designated placement office.
- (4) "AREA THAT PLCMNT STAFF REPORTS TO" Self explanatory.
- (5) "# OF STAFF" This is the total number of placement staff at the college, whether hired by the college or provided by the State of Florida.
- (6) "WHO DOES PLACEMENT" These are abbreviations that expand upon the staff positions noted in number 5. JPS is a job placement specialist, JSF is an individual provided by Job Services of Florida, DEV refers to job developers, and Co-operative Education is abbreviated as COOP.
- (7) "GRANT FUNDS FOR PL?" This was in response to the question of whether any soft money was being used for placement. In some cases the respondent was very specific and distinguished between State and Federal Grants.

(8) "HAVE JOB DEVELOPER?" - This question is self explanatory.

ocah ngabilitariyan gipat garaka ani kasibani bahaba

- (9) "RELATIONSHIP WITH VOCATNL ED ACTIVITY" This question was designed to see what formal relationship, if any, existed between the placement offices and the vocational educational departments. If no formal placement office existed, this column is blank. The most common response we have labeled "tandem" which simply means that both the placement office and the vocational education department were doing placement activities and made their information available to each other. Note that in one college the abbreviation "V do all PL" indicates that the vocational education departments do all of the placement activities. Conversely, at two colleges the vocational departments do no placements (Lake Sumter, and Okaloosa-Walton).
- (10) "RECENT INNOVATIONS" This question includes comments on new activities in the placement offices.
- (11) "NEW PLANS FOR NEXT YEAR" This question simply reflects any plans for gearing up placement activities.

Table 2 presents the same data as Table 1 but is arranged according to the "volume" of occupational activity occurring at each school. Thus the data are sorted first by the number (range) of Associate in Science graduates, and then within that category the percent this is of the total graduates. Schools with very few graduates (0-100) occur first, and within each grouping the sort is toward A.S. graduates as an increasing proportion of total graduates.

Examination of the first grouping (A.S. grads = 100 or fewer) indicates that six of the eight schools have placement offices, even though the total number of graduates is small. Four of these six schools locate their placement office within student services. The two schools that have no formal placement office present an interesting contrast. At North Florida, a Job Services of Florida individual does placement under the direction of the Dean of Student Services. At Tallahassee Community

College, however, all counselors are expected to do job placement. None of these schools have a formal job developer on board, but at Florida Keys the vocational faculty do job development. Four of the six schools with placement offices work in tandem with the vocational education faculty. At Lake Sumter and Okaloosa-Walton, however, the placement offices do all placement. Note that three of the schools plan job development for next year, with North Florida planning to focus on alumni. Finally, among these small volume schools, five of the eight have some form of grant money for placement activities.

The next grouping of schools (A.S. grads = 101-200) also includes two schools with no formal placement office. In one of these (Pasco-Hernando) counselors are expected to do placement, while in the other (Gulf Coast) Job Services of Florida provides staff for placement activities. Of the four schools with placement offices, three of them report through Student Services and one (Seminole) has a job developer on staff. For the most part, these schools have a tandem arrangement with the vocational education departments, except for Lake City where the vocational education faculty do all the placements. Finally, in plans for next year, two schools are planning to increase their staff, while one will be focusing on job development.

The next grouping of schools has a range of A.S. graduates from 201 to 400, and even in these higher volume schools two report having no formal placement office. Valencia reported that their Cooperative Education office does informal job placement as as adjunct. Listings are posted and students are free to pursue leads if they so choose. The other school reporting no placement office (Indian River) has a person from Job Services of Florida on site for placement. This individual works with the Associate Dean of Instruction. Faculty have the responsibility for placing students in their programs. For the six schools that have a formal placement office, four of them report through Student Services, and three of them have some grant funding for placement, including SPD money at Santa Fe. None of these schools report having a formal job developer, although Polk indicated that

the Job Services of Florida individual was doing job development. Four of these schools have plans for new additions next year, which include computerizing resumes or adding resumes, matching resumes against job files, as well as adding positions in the placement offices.

A STATE OF THE PARTY OF THE PAR

The last category of schools has the largest volume of Associate in Science graduates. Yet among these, St. Petersburg has no formal placement office. There is a coordinator at the school who simply tries to coordinate. All vocational faculty are expected to do job placement. Future plans include computerizing job availability and resumes so that faculty at remote terminals can have access to current information. The four schools with formal job placement offices have by far the largest number of staff dedicated to this task. Three of these schools have formal job developers, two are placing an added emphasis on graduates, and one will be adding four new positions funded by a large grant. At Daytona Beach, job development is done in conjunction with the vocational education department, while Pensacola and Broward work in a tandem arrangement with the vocational education faculty. Florida Junior College reports little contact with vocational faculty.

### Summary

Of the 27 community colleges surveyed, 20 (74%) have formal placement offices. The seven colleges with no formal placement offices are not necessarily "low volume" schools with respect to A.S. graduate production (e.g. St. Petersburg), and Job Services of Florida helps place students at three of these schools. Fourteen of the 20 schools with placement offices report to Student Services (70%), and only 5 (25%) have an individual dedicated to job development. At schools in the high volume range (401+ A.S. grads), only one school with a placement office did not have a job developer. The most common arrangement with vocational education faculty is a tandem one (14 of 20 schools = 70%) with each area doing placement and sharing information.

Innovative implementations across colleges include: (1) targeted mass mailings to graduation applicants and employers; (2) resume files matched against job files, with computerized updates of both; (3) full-time job developers; (4) Use of alumni networks; and (5) early targeting and help for disadvantaged students.
